ACTIVITY: EXPLORING AND IMPROVING AI PROMPTS

My first prompt was, “Make me a photo of Japan,” which resulted in a beautiful image of Mount Fuji, cherry blossoms, a traditional Japanese pagoda, and a peaceful sunset.

My second prompt enhances the first image by adding a “girl wearing a black and white kimono at a Sakura Festival, enjoying takoyaki with Mount Fuji in the background. Also include colorful fireworks, food stalls offering a variety of Japanese dishes, glowing lanterns, cherry blossoms, and many people dressed in different colored kimonos. The main focus is on the girl.”

The first image was a simple depiction of Japan, featuring Mount Fuji, cherry blossoms, a traditional Japanese pagoda, and a beautiful sunset. For the second image, I used ChatGPT, a Large Language Model (LLM), to enhance and improve my original prompt by adding more specific details, such as a girl wearing a black and white kimono while eating takoyaki, colorful fireworks, glowing lanterns, various Japanese food stalls, and people wearing different colored kimonos. The main difference is that the first image focuses on Japan’s scenery, while the second image presents a more detailed, vibrant, and lively Sakura Festival, with the girl as the main subject.
